

Cut out the large rectangle book as one piece. Fold (valley fold). Open. Using an exacto knife (only an adult should do this), cut around three sides of each number square so that you have little windows (or flaps); you will do this ten times.

Have your student write the Mayan numbers in order (1-10) on the smaller rectangle. Using tiny dots of glue, glue the Mayan numbers rectangle behind the windows you made. Your student should be able to open each window and see the corresponding Mayan number.

Fold to close book and add cover (next page).

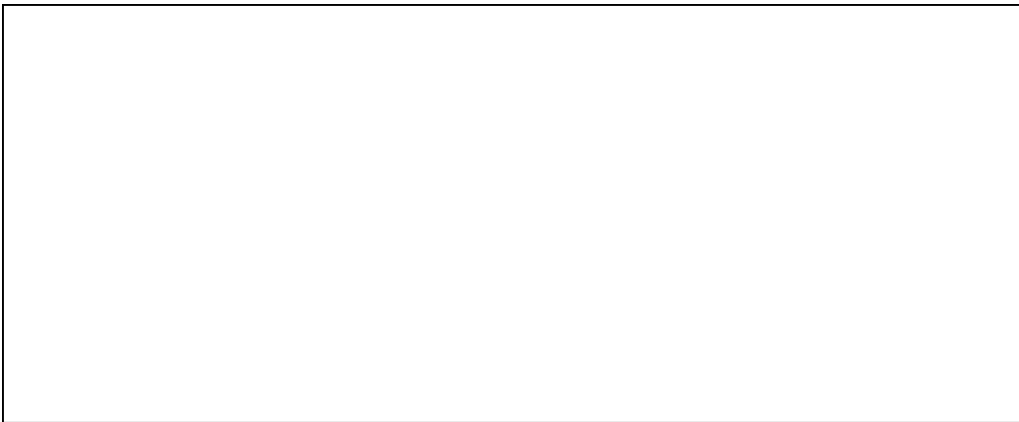

Mayan  
NUMBERS  
1-10

Cut out the rectangle above and paste it on the front cover of your book (from previous page).

Your older student may need more of a challenge. Let her make the book on the next page for numbers 11-20. The book is made the same as the book on page 1. The cover for the book is below.

Mayan
