

Cut out two rectangles (using the solid black lines). Let your student write Roman Numerals I-IX on the empty boxes (in the same order as the other numbers). Using an exacto knife, cut three of the lines around each square on the "Roman Numerals" page (the one with numbers) to make windows. Glue the page your student wrote on BEHIND the page with the windows (be careful to use small amounts of glue and not to get glue on the boxes; it would be best to use rubber cement as it will rub right off when dry). When finished, your student should be able to open/close the windows to see the Roman Numeral that corresponds with each number.

		Roman Numerals	I
		2	3
		4	5
		6	7
		8	9
		10	11
