

Print on cardstock.  
Cut out both circles.  
Remove section of top circle where marked. Insert brad through center of both circles, making sure that wheels can move freely.

Use this wheel to demonstrate the volume of one third of the population in Europe dying from the plague. If one third meant 25 million deaths, what was the total population? Mark each section of wheel with one third of the population, and color one section lightly with a black crayon.
