

Cut book out as one piece. Fold each triangle under. Turn over. Lift and write a description of each part of a Sloth's unique anatomy. Use center area to draw a picture of a Sloth or to provide additional information about the Sloth. When you are finished, fold in half on center line so that cover shows. Glue into lapbook.

The stiff fur grows from the belly toward the back so that rainwater will run off.

The muscles in their shoulders and necks are very strong!

The sloth saves energy and requires less food because it has a low body temperature. A sloth sleeps the day away.

Their hands and feet are leathery and have long claws that help them hang from tree branches.

Sloths are the slowest moving mammal.

Three-toed sloths have an extra neck bone. They can twist their heads farther than any other mammal!

The sloth eats, sleeps, and even gives birth while upside down!

Sloths are very good swimmers!
