T-book is for snowflake facts. Three things that make snowflake unique are: moisture, how cold it is, and wind. All of these factors make each snowflake different. They all start out as a drop of water that turns to ice and as it falls from the sky, collects dust particles and forms a hexagon shape based on the three (moisture, temp, and wind) will determine its uniqueness. (pointy, rounded, etc)

# Hexagon

Every snowflake has a hexagon form -6 sides or points-every one, every time! What is a hexagon? Copy "six sided object"
