

Cut out wheels. Cut away the two small rectangles on the first wheel. There is a tab on the second wheel to make it easier to spin. You can cut it off, if you prefer.

Match up wheels and attach together using a brass fastener. Put fastener through both wheels and the lapbook, or you can store the wheel in one of the prepared pockets.

Write the time, in Earth time, that it takes to make one complete rotation

Cut out pocket
Fold flaps in and
glue to lapbook
