

Cut out cards and let your student write in facts about incubation. See Beyond FIAR Volume II page 55 for information.

Cut the nest out on the dotted lines. Using an exacto knife, cut a slit directly under the eggs. It should be large enough for the egg cards to fit in. (like a pocket).

When you attach the nest to your lapbook, only use adhesive on the sides. Be careful to use a thin strip of adhesive at the bottom so that the cards can still fit down into the nest pocket.
