

Cut out each shape (cut along the dark black lines; do not cut any dotted lines). Fold each book in half (four small books and one large book). Glue the back sides of the small books into the inside of your large book.

See diagram on next page to help you visualize what your opened book will look like.

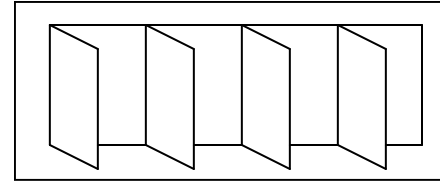

Plate Movements

<p>This movement is similar to Earth's plates sliding past each other. Where Earth's plates rub against each other like this, earthquakes can happen.</p>	<p>This is like 2 of Earth's plates separating. When plates in the ocean separate, underwater volcanoes occur.</p>
<p>When two plates move toward each other and one slips under the other. Increased earthquake and volcanic activity occurs here.</p>	<p>When two plates come together or slowly collide.</p>

On one side of each plate book have student write definition or use the one provided. On the other side of the book have student draw a picture of the plates.
