

# WHAT VOLCANOES DO FOR US

Volcanoes form islands.

Volcanoes fertilize soil.

They allow these to come closer to the surface to be mined: diamonds, gold, tin and other metals.

Pumice is used to clean teeth.

Volcanoes provided obsidian. It's used as a gemstone.

Basalt is used whenever hard rock is needed such as roads.

Cut out shapes on solid black lines. Fold on dotted lines like an accordion (back and forth, back and forth).
