

<i>Canis lupus baileyi</i>	<p>Subspecies of the Gray Wolf</p> 
<i>Canis lupus nubilus</i>	
<i>Canis lupus occidentalis</i>	
<i>Canis lupus lycaon</i>	
<i>Canis lupus arctos</i>	

Cut on solid lines. Mountain fold on dotted lines.

Under flaps, record the common names of the various subspecies of gray wolves.

Some of the characteristics that differ between subspecies are fur color, skull dimensions, length of legs, and overall size. The five subspecies of Gray Wolf living in North America are:

Canis lupus baileyi, known as the Mexican wolf or lobo

Canis lupus nubilus, known as the Great Plains or buffalo wolf

Canis lupus occidentalis, known as the Rocky Mountain wolf or Mackenzie Valley wolf

Canis lupus lycaon, known as the eastern timber wolf

Canis lupus arctos, known as the arctic wolf

	<p>What do you get if you cross a wolf and a rooster?</p>
--	---

Just for fun – Cut on solid lines, mountain fold on dotted line.
Write answer to riddle inside flap. Can you guess the answer?

An animal that howls when the sun rises!
